

Job Description: Analyst

Help us understand and quantify the markets that we work in.

tradeinspace
FINANCIAL SERVICES IN ORBIT

The Role

As an analyst at tradeinspace you'll be producing business and technical research, insights and reports into our core target markets and customers. You'll also have to look across the range of disruptive technologies that we use to make our products; satellite and drone data (what's the right set for the right smart contract?); distributed ledger systems, and the crypto world (we need to separate the real technology from the noise). Communication with external bodies will be a core part of this role, from ensuring that we're leading the discussion on real-world smart contract implementation, to defining the data-sets we should procure to meet our aims.

Skills and Experience

It's likely that you'll have a degree of some kind—but you might not; you might just have relevant work experience and a real hunger to get involved in Trade in Space.

Do you have any views of crypto and token economics and use cases? We sure do, but we'd love to hear your ideas. Communication with internal and external bodies will be a core part of this role, from ensuring that we're leading the discussion on real-world smart contract implementation, regulatory issues, and helping us to quantify the market for our technology.

Are you ready to step up and help to make tradeinspace a power house of the new space economy? We'll also expect you to help with marketing the business through the usual digital channels, and to key clients by taking an evidence based approach to explaining our value propositions.

When you join you'll immediately be a key member of the team, with a need to take responsibility for tasks and drive these towards completion—but be responsive to management instruction and direction.

Benefits

As well as the opportunity to help build Trade in Space from the start, and :

*Competitive Salary,

*Crypto-pension,

*Flexible working hours
