

## Full Stack Developer Job Description

### About Trade in Space

Trade in Space are a tech start-up based in Scotland. We use satellite data to analyse agricultural commodities and we use proprietary techniques to enable that analysis to be written to blockchain linked smart contracts.

This creates whole new ways of using insight from space, in day to day applications, and we've been described by the European Space Agency as being one of the world's most innovative businesses working at this cross-section between satellite data, and distributed applications.

We're looking for a full stack software developer, with an interest in satellite data, smart contract systems, or ideally both, to start working on some of the projects we're committed to deliver. When you join, you'll have a real opportunity to be involved in the strategic development of our applications and goals – it's a great opportunity to make your mark in a leadership role.

### The Job

We're looking for a skilled and confident computer programmer with more than just a passing interest in distributed ledger technology, capable of working with both front and back end programming. You'll be working with and helping to develop our existing blockchain architecture, and our EO machine learning output to create a front end interface our customers can use. We need you to

- Be fluent in Python and JavaScript.
- Design and develop APIs.
- Have familiarity and interest with blockchain applications.
- Have experience developing desktop and mobile applications
- Be confident in your problem solving to debug and troubleshoot and find the answers.
- Be prepared to dig in and work outside your comfort zone to help the team.
- At times be customer facing to help shape project requirements.
- Degree in Computer Science, or relevant field or equivalent experience.

Is this you? Send us a CV and covering letter to [hello@tradeinspace.com](mailto:hello@tradeinspace.com)

### Terms:

The job we're recruiting for is initially to support a 6 month project, and so will be offered on a 6 month contract.

Competitive Salary.

Home based, daily interaction with the team via video calls, with face-to-face meet-ups with the team if appropriate given the weird circumstances we're in. But we'll make sure you have everything you need. **No recruitment agencies please.**
